

Release Notes - eVacc v1.5

Overview

eVacc version 1.5 has had changes made with regards to the reporting module. The three downloadable files have now been updated to ensure full compatibility with Microsoft Excel. In addition to this feature change there are a number of enhancements and bug fixes that have been made.

Key Highlights

Reporting Enhancements

The previous reports that were available within eVacc were as specified by NHS Digital and used for submissions to the downstream systems such as DPS. Within this release we have built two brand new reports for you to be able to download and review. The reports contain all key information from the vaccination flow and once downloaded will open within Excel with no need for file manipulation.

The reporting module now provides the user with the ability to specify a date/time range from which a report may be produced. By default the values within these fields will be set to the last 14 days starting at 00:00 and finishing at 23:59. Once the dates and times have been entered, selecting either the Vaccines Administered or Adverse Reactions button will then prompt to download the resultant CSV file. It should be noted that the report will return details of any vaccination encounter which was started (i.e. the Additional Information questions recorded) between the dates specified.

Vaccinations Administered contains the following fields;

- Link to patient record
- Date of birth
- Vaccination ID
- Gender
- Usual GP
- Additional information recorded on
- Additional information recorded by
- Additional information performed on
- Additional information performed by
- Carer
- Health care worker
- Social care worker
- Lives in residential care home
- Works in residential care home
- Preassessment recorded on
- Preassessment recorded by
- Vaccination administration recorded by
- Vaccination administration performed on
- Vaccination administration performed by
- Dose
- Vaccine manufacturer
- Consent given
- Consent provided by
- Safe to proceed
- Not safe to proceed reason
- Protocol
- Care setting type
- Care setting name
- Care setting ODS
- Vaccine batch
- Vaccine drawn by
- Completed

- Preassessment performed on
- Preassessment performed by
- Unwell with fever
- Prior allergic reaction
- Prior unexplained anaphylaxis
- Is pregnant
- Trialling covid vaccine
- Bleeding disorder
- Covid symptoms
- Prior thrombosis
- History of hitt
- Vaccination administration recorded on

- Reason not given
- Vaccine site
- Vaccination notes
- BSA claim ID
- BSA outcome
- BSA claim failure reason
- BSA recorded on
- Adverse reactions recorded on
- Adverse reactions recorded by
- Adverse reactions performed on
- Adverse reactions performed by
- Adverse reaction count

Adverse Reactions contains the following fields;

- Link to patient record
- Date of birth
- Vaccination ID
- Gender
- Usual GP
- Additional information recorded on
- Additional information recorded by
- Additional information performed on
- Additional information performed by
- Preassessment recorded on
- Preassessment recorded by
- Preassessment performed on
- Preassessment performed by
- Unwell with fever
- Prior allergic reaction
- Prior unexplained anaphylaxis
- Is pregnant
- Trialling covid vaccine
- Bleeding disorder
- Covid symptoms
- Prior thrombosis
- History of HITT
- Vaccination administration recorded on
- Vaccination administration recorded by
- Vaccination administration performed on

- Vaccination administration performed by
- Dose
- Vaccine manufacturer
- Consent given
- Consent provided by
- Safe to proceed
- Not safe to proceed reason
- Protocol
- Care setting type
- Care setting name
- Care setting ODS
- Vaccine batch
- Vaccine drawn by
- Completed
- Reason not given
- Vaccine site
- Vaccination notes
- Adverse reactions recorded on
- Adverse reactions recorded by
- Adverse reactions performed on
- Adverse reactions performed by
- Reaction type
- Reaction description
- Reaction onset
- Reaction severity
- Reaction notes

Other Changes

Registration

EF-1706 Error when registering an address containing erroneous commas

An issue was identified whereby if an address contained misplaced apostrophes, at the point of saving an error would be shown. The

General

EF-1538 Add FAQ question explaining how to change default protocol

A new question has been added to the FAQ along with the answer in how to ensure that the protocol value presented in the screening template is defaulted to the required value for the care setting. The protocol values allowed are as follows;

- National Protocol
- Patient Group Direction
- Patient Specific Direction

Vaccination

EF-1375 Drawer/Drawer Supervisor usability issues

During the onboarding of customers there have been questions raised regarding the use/need of the drawer fields. Within this release of eVacc we have modified the help text to give better direction in determining the correct value.

EF-1618 Amendment of historic vaccination data nullifies the batch field if the batch has expired

When editing a vaccination event if the batch recorded had since expired, the batch field would be set as empty. Although this issue did not alter any data, there was concern that users may believe that they had accidentally removed information. This issue has now been corrected and the recorded batch will persist when editing regardless of the expiry date.

Adverse Reactions

EF-1584 Adverse Reaction Onset Time is not persisting

When editing an adverse reaction event the onset date and time field would be set as empty. Although this issue did not alter any data, there was concern that users may believe that they had accidentally removed information. This issue has now been corrected and the onset date and time persists when editing regardless of the expiry date.
