

2.0 Release Notes - (Marazion)

Information

To ensure that we continue to be at the leading edge of the vaccination programme this release contains an update to the underlying SNOMED database. This ensures that recently formed clinical codes are available for use.

SNOMED

[\[EF-2818\]](#) - The product must use the most up to date version of SNOMED data released by NHS-D

The latest release of the SNOMED dataset has been retrieved from the NHS Technology Reference Update Distribution (TRUD) website. This has been parsed and updated within our SNOMED API ensuring that we are using the most up to date information. This is only directly accessible currently within the adverse reactions template when selecting a reaction of 'Other' and then performing a search for a specific adverse reaction.

[\[EF-2767\]](#) - Normalise patient names

Previously it was not possible to search for a patient's surname or forename that included an accent. This has now been corrected within this release and allows a search to be performed against a normalised version of a patient name.
